About Silence Therapeutics plc

Silence Therapeutics is developing a new generation of medicines by harnessing the body’s natural mechanism of RNA interference, or RNAi, within its cells. Its proprietary technology can selectively inhibit any gene in the genome, specifically silencing the production of disease-associated proteins. Silence’s proprietary RNA chemistries and delivery systems are designed to improve the stability of molecules and enhance effective delivery to target cells, providing a powerful modular technology well suited to tackle life-threatening diseases. The Company has secured high value research and collaboration agreements with AstraZeneca, Mallinckrodt Pharmaceuticals and Takeda. For more information, please visit:
